

BadgerNet Update 2/6/17 (TEACH & AU)

All communications are first sent to you, the Single Point of Contact (SPOC). Please share this communication with the appropriate resources within your organization.

Good Afternoon,

Unfortunately, due to a delay in the core structure equipment, AT&T was unable to meet the February 1st launch date for transformation. However, circuit and equipment survey's will continue to be scheduled and completed. Once the AT&T core network is complete, transformation will begin immediately. Please note, with AT&T continuing the survey process, it will speed up the transformation process once it begins. No installations will be completed or scheduled until after survey remediation is completed and the core network is operational.

As the BadgerNet SPOC, several communications may be sent to you from AT&T regarding remediation for the Circuit Survey. These auto-generated emails are incomplete and may provide misinformation. AT&T is unable to prevent these emails from being sent. DOA - DET will send the official required remediation once the official circuit survey information is complete.

We apologize for any inconvenience or confusion these changes may cause you!

Remember to share this communication within your organization.

Please feel free to contact us with any questions or issues at DOADETBadgerNet@wisconsin.gov, or visit the [BadgerNet portal](#) for more information.

Sincerely,
BadgerNet Team
